Lucas Reist

Data Engineer · BI Developer · Analytics Engineer

Kalamazoo, MI | lucas.reist@gmail.com | linkedin.com/in/lucasreist | narlaq.github.io

SUMMARY

I'm a data engineer and BI developer with fifteen years of experience working with data in banking, credit unions, medical devices, and casino hospitality. As part of a team of three, I designed / built / maintain a company-wide data warehouse and analytics platform (SQL Server, SSIS, SSAS Tabular, Python) that our C-suite called "completely game-changing." I have a passion for mathematics, databases, and code, and I genuinely enjoy turning messy data into reporting that people can trust (yes, that includes Excel). I'm looking for a team with interesting data, where skepticism is not only allowed, but encouraged.

SKILLS

- **Data engineering:** T-SQL (stored procedures, window functions, performance tuning), SSIS, SQL Server Agent, data warehouse design, data cleansing and standardization
- **BI and semantic modeling:** Power BI, DAX (calculation groups, time intelligence), SSAS Tabular, SSRS, Tableau, Excel
- **Programming and automation:** Python (pandas, ETL, report and file ingestion), PowerShell (deployment and automation scripts), VBA, Power Automate (cloud and desktop flows)
- **Development tools:** Visual Studio, Git, source control and CI/CD
- **Practices:** data quality and validation, coding standards, process automation, training analysts in SQL and DAX
- **Systems worked with:** SQL Server, Snowflake (Datascape), Fiserv (Premier), Jack Henry (ProfitStars), BytePro, Sagent (LoanServ), Salesforce, Oracle HRMS, Experian, Opera PMS

EXPERIENCE

Business Intelligence Analyst III — Northpointe Bank — Aug 2021 – Present

Banking

- Co-designed and built, on a three-person team, the company-wide data warehouse and analytics platform (SQL Server, SSIS, SSAS Tabular, Python). It cleans, normalizes, and unifies data from many source systems into one vetted reporting source, with scalable performance and robust error logging.
- Built Tabular semantic models with calculation groups for time intelligence and trend periods, giving every report the same date logic.
- Automated manual report production with SSIS packages, SQL Agent jobs, Python, Power Automate, and file-transfer tooling, saving tens of hours a month and improving accuracy.
- Led the data work when a department was outsourced to a third party: ingested, cleaned, and staged the vendor's data, and reworked several departments' reporting so nothing was lost in the transition.
- Wrote the team's T-SQL coding standards; train analysts across the business in SQL, DAX, and reporting best practices.
- Own a set of business-critical reports and partner with each department when requirements change.

Lending Analyst — Advia Credit Union — Aug 2018 – Aug 2021

Financial services

- Found credit card behavior patterns that predicted charge-offs with a 79% success rate, and showed high-utilization revolvers were 13% more likely to go delinquent.
- Automated the charge-off recommendation process end to end with SQL and VBA, from finding qualifying accounts to valuing pre-merger loans. Saved collections leadership 8+ hours a month and turned the analysis into a one-click refresh with secured embedded queries.
- Replaced recurring Excel reports with Power BI dashboards across several business areas, letting users explore their own data.
- Ran auto and credit card pre-approval campaigns from the data side: targeting queries, Experian file prep, segmentation, offer assignment, and delivery to marketing and systems teams.
- Delivered reporting, analysis, and research directly to the EVP of Lending.

Stryker Aug 2015 – Jun 2018

Medical devices

Sr. Business Analyst, Flex Financial Feb 2017 – Jun 2018

- Owned data accuracy for a 17,000-record Access database and the division's Salesforce instance, and set source-of-truth rules between them.
- Built reports and dashboards that drove sales decisions; redesigned contract tracking for co-term amendments.
- Served on the Process Improvement Council, finding waste across the business process.

HR Systems Support Analyst Aug 2015 – Feb 2017

- Built Tableau dashboards for Global HR and Talent Acquisition, including data mapping and prep for Tableau and Power BI.
- Configured Oracle HRMS (Advanced Benefits, Payroll, Self Service), ran regression and patch testing, and audited user access to sensitive employee data.

FireKeepers Casino Hotel Jul 2009 – Aug 2015

Gaming and hospitality

Yield Manager Sep 2012 – Aug 2015

- Set hotel rate and room-block strategy with the executive team, using occupancy and revenue analysis built from Opera exports.
- Planned and ran monthly direct mail and email campaigns that drove occupancy, revenue, and loyalty.

Database Supervisor Jun 2011 – Sep 2012

- Built targeting queries and offer campaigns for an 800,000+ player database across direct mail, email, and social media.
- Built pro forma models of response rate and revenue by offer value, channel, and distance; variance against actual results dropped substantially once adopted.

Earlier roles: Income Auditor (VBA tooling; reconciled 2,700+ slot machines daily), Slot Technician, Count Team Clerk.

Earlier experience 2007 – 2009

Store Manager, Genesco · Tax Accountant, Shivley & Associates CPA (200+ individual returns) · Office Associate, Rogers & Hollands Jewelers

EDUCATION AND CERTIFICATIONS

- **BBA, Accounting** — Siena Heights University (2009)
- **AAS, Accounting; AAS, Business Administration; AS, General Studies** — Kellogg Community College (2008)
- **Certifications:** CompTIA A+ (2002, lifetime) · Mastering DAX Workshop · The Data Scientist's Toolbox
